

ENBD REIT (CEIC) PLC

Priced at Half of NAV and Likely to Stay There: The 8% Yield Is the Whole Return; Neutral, Dec-27 PT \$0.53

ENBDREIT, Nasdaq Dubai | SHARI'A-COMPLIANT UAE REAL ESTATE

NEUTRAL

Price (23 Jul 2026, last trade): \$0.500

Price Target (Dec-27): \$0.53

INVESTMENT THESIS

We initiate on ENBD REIT at Neutral with a December 2027 target of \$0.53, 6% above the \$0.500 at which the shares last traded on 23 July, the last print on or before our valuation date. Add the FY2026 distribution of \$0.0404 and the implied twelve-month total return is 14.1%, just inside our Neutral band, and effectively all of it is the dividend. The debate here is not the property. It is the 51% discount to the 31 March 2026 NAV of \$1.02, and whether anything closes it. The record says no. The manager launched a buyback in February 2019 and the board proposed delisting in December 2019, both because the shares traded far below NAV. The fund is still listed, NAV per share is \$1.02 today against \$1.02 then, and every recorded print in 2026 sits in a 49% to 51% band.

The portfolio itself had a good year: NAV up 16.5% to \$254.7m, the ten Dubai assets marked up 8.6% to \$430m, occupancy at a record 95%, loan-to-value down to 42% and FFO up 11.7% to \$12.5m. Three things stop us paying for it. Seventy-three percent of FY2026 net income was unrealised revaluation, and the March quarter gave roughly \$6m back. The entire \$181m financing matures on 7 December 2026 unrefinanced, which is why current liabilities jumped from \$13.6m to \$198.0m. And the fee is charged on NAV, not market value: 1.5% of \$254.7m is 3.1% of the \$125m market capitalisation.

- The discount is both the asset and the problem: \$0.500 against a \$1.02 NAV, in a 49-51% band all year and no narrower than at the 2019 buyback or the 2020 delisting attempt.
- An 8.1% dividend yield covered 1.24x by FFO is the entire expected return. Our target embeds no narrowing of the discount whatsoever.
- Fee load and the December maturity are the live risks: the 1.5% NAV fee is 3.1% of market cap a year, and \$181m falls due on 7 December 2026.

COMPANY OVERVIEW

ENBD REIT is a Shari'a-compliant, closed-ended real estate investment trust incorporated in the DIFC, listed on Nasdaq Dubai since March 2017 and managed by Emirates NBD Asset Management Limited, a DFSA-regulated subsidiary of Emirates NBD Bank PJSC. Its predecessor fund dates to 2005. At 31 March 2026 it held ten Dubai assets worth \$430m: 72% offices, led by Burj Daman in the DIFC, Al Thuraya Tower 1 and The Edge; 13% residential; and 15% alternatives, a school and student housing on long leases.

All figures are ENBD REIT's own, not Emirates REIT's. FY23A-FY26A per each year's Nasdaq Dubai results announcement (FY26 released 22 May 2026) and the audited accounts. No forward columns are shown: we can find no published sell-side estimate, consensus figure or price target for ENBDREIT anywhere, so an FY27E column would be invented rather than sourced. Market data at the last recorded print of 23 July 2026; the shares did not trade on 29 or 30 July. Free float is "-" and beta omitted: no unpaywalled float disclosure was found, and a beta on three prints a month is not meaningful.

The fund reports and is quoted in US dollars, with a dirham functional currency pegged at AED 3.673, so no translation is applied here. Note that the separate and larger Emirates REIT (ticker REIT) also lists on Nasdaq Dubai; none of its figures appear in this note.

FY2026 RESULTS (YEAR TO 31 MARCH 2026)

Results were released on 22 May 2026 and remain the fund's most recent reported period. NAV rose 16.5% to \$254.7m, or \$1.02 per share on 250.0m shares, and the portfolio was valued at \$430m, up 8.6%. Occupancy held at a record 95%, with The Edge reaching 99% after a 15,000 sq ft expansion and a 30,000 sq ft renewal. Loan-to-value fell to 42% from 46%. Funds from operations, the fund's reported net rental income measure, grew 11.7% to \$12.5m and net income rose 35% to \$45.5m for EPS of \$0.182. Rental income was \$37.7m against \$36.9m and finance costs fell to \$11.9m from \$13.2m. The \$0.02 final dividend took the FY2026 distribution to \$10.1m, or \$0.0404 per share; it went ex on 7 July and was paid on 22 July 2026, so the \$0.500 last print is ex-dividend.

The composition of that improvement deserves attention. FFO grew \$1.3m and finance costs fell \$1.3m, while rental income added only \$0.8m on a portfolio written up by \$35m. On the year's own numbers, essentially the whole FFO improvement came from cheaper debt service rather than from the buildings. And \$33.0m of the \$45.5m of net income, 73%, is the revaluation and other line, which we derive as net income less FFO. That derivation is not a guess: applied to FY2025 it gives \$22.5m, reconciling exactly to the \$22,506,402 unrealised property gain in the audited FY2025 accounts.

The fourth quarter is where the deceleration shows. Against the 31 December 2025 NAV of \$257.4m and portfolio of \$436m, the March figures of \$254.7m and \$430m imply that the January to March quarter took roughly \$6m off the portfolio and produced a net loss of about \$3.4m even though quarterly FFO was around \$3.1m. One quarter is not a trend, but it is the first negative revaluation quarter of this cycle and it arrives against a cooling backdrop: Savills reported average Dubai office rents flat at AED 238 per sq ft in Q2 2026, the first quarter without growth since H1 2021, with 1.9m sq ft of completions due in 2026 and a pipeline above 4.2m sq ft by 2030.

Weighted average unexpired lease term is the other line moving the wrong way, and it has moved the same way for four consecutive years: 3.90 years at FY2023, then 3.74, 3.41 and now 3.00. The composition matters more than the average. The alternatives sleeve, 15% of value and consisting of a British-curriculum school and student accommodation, carries a WAULT of 10.76 years. The office book, 72% of value, carries 1.56 years and residential 1.12 years. Roughly seven-eighths of the portfolio by value reprices inside two years, which was a powerful tailwind while Dubai office rents were compounding and is exactly as powerful in reverse.

Jonathan McGloin, Head of Real Estate at Emirates NBD Asset Management, framed the year as one in which "NAV grew meaningfully, FFO improved, and occupancy remained at its highest recorded level, a reflection of the quality of the portfolio." Each claim is accurate. None of them is the reason the shares trade where they do. Note also that the June-quarter NAV had not been published as at 30 July 2026; on last year's timetable the equivalent statement came on 12 September.

FINANCIAL SUMMARY

ENBD REIT (CEIC) PLC -- Summary Financials and Portfolio Metrics

Source: ENBD REIT full-year announcements of 26 May 2023, 11 June 2024 and 22 May 2026 (the last carrying FY2025 comparatives); the audited financial statements to 31 March 2025; the fund's website key figures at 31 March 2026; Akul Veauli Securities LLC. Fiscal years end 31 March; loan-to-value, occupancy and WAULT for the same years appear in KEY METRICS. FFO is the fund's reported net rental income; revaluation and other is derived by us as net income less FFO and is not a company-reported line. Per-share figures use 250.0m shares. Basis differences between the announcements and the audited accounts, and the reconciliation of the derived revaluation line, are set out under Important Disclosures. "-" indicates a figure not disclosed in any unpaid source checked; it has not been estimated.

THE DISCOUNT, THE FEE LOAD AND THE LIQUIDITY

Start with the discount, because for a closed-ended fund it is the investment case. At \$0.500 the market capitalisation is \$125.0m against a NAV of \$254.7m, a gap of \$129.7m. Read that gap straight through to the assets and the market is pricing the ten-property portfolio at roughly \$300m against an independent valuation of \$430m, a haircut of about 30%. The equity is priced for the buildings to be worth 30% less than the valuers say. That is either a remarkable opportunity or an accurate statement of what a minority stake in an externally managed, unliquidatable and barely traded Dubai fund is worth to the marginal buyer. Six years of evidence favour the second reading.

In February 2019 the manager launched a \$3.5m programme to buy back up to 4,401,340 shares, explicitly to "realise value for all shareholders by repurchasing shares currently trading at a significant discount to current market valuations of the underlying assets." NAV was then \$1.11. In December 2019 the board went further and proposed delisting from Nasdaq Dubai altogether, arguing that trading privately "would remove the value gap between the publicly traded share price and NAV." NAV was then \$1.02, precisely where it stands today. The EGM was postponed on 11 February 2020 for want of proxies, several substantial holders including National Bonds and Sancta Capital opposed the deal on valuation grounds, and the fund remains listed. Two deliberate attempts, no narrowing, and no buyback in force today.

Now the fee, the second reason the discount is rational. Emirates NBD Asset Management charges 1.50% of NAV on the first \$550m of net assets, with a performance fee of 10% above a 7% hurdle subject to a high-water mark; none was charged in FY2024 or FY2025. On the 31 March 2026 NAV the base fee is roughly \$3.8m a year, against \$3.19m charged in FY2025 on a smaller NAV. Because it is levied on net asset value rather than market value, a shareholder buying at a 51% discount pays 1.5% on a number roughly twice what they paid: an effective 3.1% of invested capital every year. Against FY2026 FFO of \$12.5m that is 31%; against the \$10.1m distributed, 38%. The wider overhead is larger again: the FY2025 accounts disclose a total expense ratio of 1.19% of gross asset value, which on FY2026 gross assets of \$469m is roughly \$5.6m, or 4.5% of market capitalisation a year. A fixed cost base of that size on a \$125m quoted vehicle is not a rounding error. It is both a reason the discount exists and a reason a rational buyer should insist on one.

Third, liquidity, which changes what a rating on this security even means. Public trading records show prints on only three sessions in July 2026 up to our date, on the 6th, 14th and 23rd, of 9,050, 28,920 and 13,000 shares. Average daily volume is reported at roughly 40,000 shares, about \$20,000 of value a day at \$0.500. A \$2m position is one hundred days of the entire market's volume. No institutional account can build or exit this name in size, and price formation at 51% below NAV on 13,000 shares is less a considered market judgement than the absence of one. One caveat against ourselves: the same record shows a single 18.92m-share print on 9 June 2026, roughly 7.6% of the register, which we cannot corroborate against an exchange disclosure and therefore exclude from the volume figures above.

FINANCING AND THE DECEMBER MATURITY

In December 2021 the fund refinanced its entire debt stack into a single five-year, \$200m-equivalent Shari'a-compliant Murabaha facility from Emirates NBD and Commercial Bank of Dubai, replacing \$45m from Standard Chartered and \$150m from Mashreq. Anthony Taylor, then Head of Real Estate at the manager, called it "a major step in strengthening our financial position," and on the evidence he was right: finance costs have fallen from \$14.4m in FY2024 to \$13.2m and then \$11.9m. The FY2025 audited accounts show \$182.8m drawn at margins of 175bp and 195bp over three-month SOFR, with final maturity on 7 December 2026.

That date is four months away, and as at 30 July 2026 no refinancing had been announced. The FY2026 balance sheet says the same thing more loudly than any press release: total current liabilities of \$197.97m against \$13.62m a year earlier, because the whole facility has been reclassified as due within twelve months. On \$430m of property at 42% LTV the drawn balance is roughly \$181m, and the implied all-in cost of about 6.6% is the number a new facility has to beat, match or miss.

We do not treat this as a solvency question and we would resist anyone who framed it that way. LTV is at its lowest in the fund's listed life, occupancy is at a record, the manager's parent is also the lead lender, and Dubai bank appetite for prime DIFC and Media City office collateral is not in doubt. We treat it as a pricing question with a badly skewed payoff for a stock this illiquid. A refinancing on unchanged terms is worth close to nothing to the share price, because the market has declined to pay for good news from this fund for six years. A refinancing at a wider margin, or one introducing scheduled amortisation, comes straight out of the \$12.5m of FFO that funds the \$10.1m distribution: every 50bp on \$181m is \$0.9m, or 7% of FFO, against cover of only 1.24 times.

VALUATION AND PRICE TARGET

There is no consensus to lean on. We can find no published sell-side model, estimate or price target for ENBDREIT from any source checked as at 30 July 2026, and the free aggregators carry price and dividend data only. Nor is a discounted cash flow the right instrument for a ten-asset closed-ended fund whose reported earnings are three-quarters appraisal movements. We therefore build the target from three observable anchors: the discount at which the shares trade, the yield at which they trade, and the FFO the fund generates.

We first roll NAV forward. From \$1.019 per share at 31 March 2026 we add retained FFO of \$0.0096 a year (FFO of \$0.050 less the \$0.0404 distribution) and portfolio revaluation of 2.5% a year, or \$0.043 per share, deliberately well below the 8.6% delivered in FY2026 given that the March quarter was already negative and Dubai office rents were flat in Q2 2026. Over the twenty-one months to December 2027 that gives a Dec-27 NAV of \$1.11. At zero revaluation it is \$1.04; at 5% a year, \$1.19.

(1) Constant discount. The observed discount has been 49% to 51% on every one of the eighteen prints recorded this year, and no wider or narrower than at the 2019 and 2020 attempts to close it. Holding 50% against a Dec-27 NAV of \$1.11 gives **\$0.556** (at a 45% discount, \$0.611; at 55%, \$0.500; on the zero-revaluation NAV, \$0.518). (2) Dividend capitalisation. The distribution has ranged between \$0.036 and \$0.0404 since 2017 and is covered 1.24x. The mean of the eighteen recorded 2026 closes is \$0.507, an implied yield of 8.0% on the FY2026 dividend; capitalising \$0.0404 at 8.0% gives **\$0.505** (at 7.5%, \$0.539; at 9.0%, \$0.449). (3) FFO yield. FY2026 FFO of \$0.050 per share is a 10.0% yield at \$0.500. Growing FFO at 4% a year, well below the 11.7% of FY2026 because that came almost entirely from a \$1.3m fall in finance costs that will not repeat if the facility reprices wider, gives \$0.0536 by Dec-27; at an unchanged 10.0% FFO yield, **\$0.536**.

The simple average is \$0.532, rounded to a **Dec-27 target of \$0.53**. That is a price return of +6.0% on the \$0.500 close, and with the \$0.0404 dividend a twelve-month total return of +14.1%, which maps to **Neutral** under our thresholds of above +15% for Overweight and below 0% for Underweight. At the target the shares would stand at a 48% discount to the current \$1.02 NAV, a 52% discount to our Dec-27 estimate, and on a 7.6% yield. Overweight requires a target above \$0.535 and Underweight one below \$0.460, so the call is genuinely marginal and we say so rather than round it away.

The honest way to describe that result is that one assumption carries the rating. Take anchor one at a 45% discount rather than 50% and the average becomes \$0.55, the total return +18.1%, and the rating Overweight. Assume the discount narrows to 40% on the Dec-27 NAV and the shares are worth \$0.67, a total return of +41%. An analyst who thinks the December refinancing is a catalyst, or who assigns even a modest probability to a corporate action that crystallises NAV, reaches Overweight on defensible arithmetic. That is a respectable position and we will not caricature it. We simply decline to pay in advance for an outcome proposed twice, in February 2019 and December 2019, and delivered on neither occasion, in a security where the annual fee drag on invested capital is 3.1% and the average day's trading is \$20,000.

Two limitations on the above. All three anchors are calibrated on the fund's own trading history, which is thin enough that the calibration is fragile: eighteen prints in five months is a small sample and the \$0.507 mean could shift on a handful of trades. And the Dec-27 NAV rests on an appraisal series we cannot independently verify, produced for a manager whose fee is a percentage of that same appraised NAV. The valuations are prepared by external valuers and we allege nothing improper, but the incentive should be named in a note that leans on NAV as heavily as this one does.

UPSIDE RISKS

Risks that would drive the shares above our price target include, but are not limited to, the following:

- Any credible move to close the discount. A resumed buyback, an asset sale at or above book, a tender or a revived take-private would be worth more than years of operating progress. At a 40% discount to our Dec-27 NAV the shares are \$0.67.
- The refinancing completes on better terms. Margins of 175bp to 195bp were struck in December 2021 against a 46% to 53% LTV; the fund refinances at 42% with record occupancy. Every 50bp saved on \$181m is \$0.9m, 7% of FFO.
- Revaluation reaccelerates. FY2026 added \$33.0m of appraisal gains on a \$430m portfolio. A repeat, rather than the 2.5% we assume, takes Dec-27 NAV to \$1.19 and the shares to \$0.59 on an unchanged discount.
- Short lease terms cut the other way. A 1.56-year office WAULT on 72% of the portfolio means the office book reprices to market inside two years, so any resumption of Grade A rental growth flows through faster here than at a long-let peer.
- Dividend growth. The distribution rose from \$7.5m in FY2024 to \$10.1m in FY2026, is covered 1.24x, and cash cover improves with every dollar taken out of finance costs.
- Grade A demand is holding. Savills reported DIFC Square substantially pre-let ahead of completion and continued resilience in prime space in Q2 2026, the segment in which the fund's largest assets sit.
- Illiquidity is symmetrical. A security trading \$20,000 a day on three sessions a month can move a long way on one institutional buyer, in either direction.

DOWNSIDE RISKS

Risks that would drive the shares below our price target include, but are not limited to, the following:

- The discount simply persists, our base case and the main risk to any bull. It has not narrowed through a buyback, a proposed delisting, a 16.5% NAV increase or a fall in LTV from 53% to 42%, and nothing scheduled changes it.
- The December 2026 maturity is unresolved. The whole \$181m facility falls due on 7 December 2026 and sits in current liabilities, which rose from \$13.62m to \$197.97m in a year. Nothing had been announced as at 30 July 2026, and wider pricing or amortisation takes directly from a distribution covered 1.24x.
- Fee load on a small base. The 1.50% NAV fee is 3.1% of market capitalisation a year for a buyer at today's price, 31% of FFO and 38% of the distribution; the FY2025 total expense ratio of 1.19% of gross assets implies about \$5.6m, or 4.5% of market capitalisation.
- Earnings are mostly marks. \$33.0m of \$45.5m of FY2026 net income is unrealised revaluation. Strip it out and the fund earns \$0.050 per share against a \$0.0404 distribution: reported EPS of \$0.182 flatters the economics by more than three times.
- The March quarter already reversed. Portfolio value fell about \$6m and the quarter produced a net loss of roughly \$3.4m despite positive FFO, the first negative revaluation quarter of this cycle.

- Short income duration into a softening market. WAULT has fallen from 3.90 years to 3.00 in four years, with 1.56 on the office book and 1.12 on residential; only the 15% alternatives sleeve is long-let. Against 1.9m sq ft of 2026 office completions, more than 4.2m sq ft by 2030 and average rents that Savills reported flat in Q2 2026, the portfolio reprices down quickly.
- Liquidity makes the position unmanageable for institutions. Three printed sessions in July 2026 to our date and about \$20,000 of daily value mean any meaningful holding is effectively locked, and marks are set by trivial volumes.
- Governance and alignment. The manager is a subsidiary of Emirates NBD, also the lead lender under the maturing facility, and is paid on appraised NAV rather than on market value or cash returned. No published sell-side coverage exists to scrutinise the estimates.
- Concentration. Ten assets, all in Dubai, 72% in one sector, with the three largest offices the majority of value. A single vacancy at Burj Daman, Al Thuraya 1 or The Edge is a material event.

ANALYST CERTIFICATION

I, Akul Veauli, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject company and its securities. I also certify that no part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed in this report. I am a real person and the sole author of this report. I am not a registered or certified research analyst: any "AC" analyst-certification mark previously shown next to my name was self-applied for layout purposes, is not a real credential, and has been removed. "Akul Veauli Securities LLC" is an invented firm name and is not a real or registered entity.

IMPORTANT DISCLOSURES

Akul Veauli is a real person and is the sole author of this report, which he wrote himself as an independent work sample in the style of sell-side equity research. He is not a registered or certified research analyst. "Akul Veauli Securities LLC" is an invented firm name used for presentation purposes only; it is not a registered broker-dealer, investment adviser or research provider in any jurisdiction. The rating, price target, estimates and analyst commentary in this document are the author's own independent work and reflect his genuine views as of the date of this report; they were not produced under any regulated research process and are not investment advice.

This document is not affiliated with, produced by, reviewed by, or endorsed by J.P. Morgan Chase & Co. or any of its affiliates. Any visual resemblance to the general layout conventions used across the sell-side equity research industry is intended purely as a stylistic reference and does not indicate any relationship with a specific firm.

Subject company identification: this note concerns ENBD REIT (CEIC) PLC, Nasdaq Dubai ticker ENBDREIT, ISIN AEDFXA1CN004, managed by Emirates NBD Asset Management Limited. It does not concern Emirates REIT (CEIC) PLC, ticker REIT, a separate, larger and differently managed Nasdaq Dubai vehicle; no Emirates REIT figure appears anywhere here.

Estimate sourcing: no forward estimates are published. We could find no sell-side model, consensus estimate or price target for ENBDREIT from any source checked as at 30 July 2026, so KEY METRICS shows four reported fiscal years rather than forward columns and the target is built solely from the fund's own disclosed NAV, dividend and FFO and its observed trading history. FY2023 to FY2026 data are from the full-year announcements of 26 May 2023, 11 June 2024 and 22 May 2026 (the last carrying FY2025 comparatives), the NAV statements of 12 September 2025, 20 November 2025 and the Q3 to 31 December 2025, the audited financial statements to 31 March 2025, and the fund's website key figures at 31 March 2026. FY2026 balance-sheet items, including total current liabilities of \$197.97m and total assets of \$469.24m, are from the audited annual series compiled by Investing.com. Gross debt of about \$181m, cash of about \$25m, enterprise value of about \$280m, the \$3.8m management fee, the \$5.6m total expense figure, the implied \$300m portfolio value, the derived revaluation line and all per-share and yield calculations are analyst-derived.

Table basis: rental income in the Financial Summary is as stated in each year's own announcement; the audited total-revenue line differs marginally (FY23 \$31.0m, FY24 \$34.1m, FY26 \$37.6m) and the FY2025 announcement quoted \$37.5m on a gross-income basis, so growth rates in the text use the FY2026 announcement's own pair of \$37.7m against \$36.9m. The derived revaluation and other line reconciles exactly to the \$22,506,402 unrealised property gain in the audited FY2025 accounts. FY23 net income is \$21.4m per those accounts against \$21.9m in that year's announcement.

Market data: the fund reports and is quoted in US dollars; its functional currency is the UAE dirham pegged at AED 3.673, and no translation has been applied. The \$0.500 price used throughout is the last recorded trade, on 23 July 2026; the shares did not print on 29 or 30 July. Price history, the 52-week range of \$0.430 to \$0.537, the reported one-year change of -9.1% and average daily volume of about 40,000 shares are from Investing.com data for the twelve months to end-July 2026. Because the shares print on only a minority of sessions, ranges and period changes are sensitive to which dates carry a trade, and no beta or free-float figure is shown because neither is meaningful or obtainable on that basis. A single 18.92m-share print on 9 June 2026 could not be corroborated against an exchange disclosure and is excluded from the volume discussion. Dubai office data are from the Savills Q2 2026 release. The price chart plots recorded closes on the eighteen sessions that printed between 20 February and 23 July 2026, spaced by print rather than by date.

RATING DEFINITIONS

Overweight: total return expected to exceed the average total return of the analyst's coverage universe over the next 6-12 months. Neutral: broadly in line with that average. Underweight: below it. For this note the rating was applied mechanically to the implied twelve-month total return from the derived price target: Overweight above +15%, Underweight below 0%, Neutral otherwise. ENBDREIT's implied return of +14.1%, a +6.0% price return to the \$0.53 target plus the 8.1% dividend yield on the \$0.500 close of 23 July 2026, maps to Neutral. Overweight would require a target above \$0.535, Underweight one below \$0.460. These are generic sell-side rating conventions, not a registered firm's published rating scale.

GENERAL DISCLAIMER

This document is an independent work sample produced by Akul Veauli and presented in the format conventions of sell-side equity research. It is not a regulated research product: it was not produced under the supervisory, compliance or conflicts-of-interest procedures that govern published research at a registered firm, and it must not be represented as such. The analysis, rating and price target are the author's own genuine views. Nothing here is investment advice, and recipients should consult a qualified, licensed financial professional and a firm's official published research before making any investment decision.
